

DigiPoS Retail SaaS

Software as a Service is set to change the face of retail applications

Digipos has designed RSaaS (Retail Software as a Service) to meet the real-time challenges of the coming years – through providing Software as a Service to compliment the already market leading technology suite of Retail Blade EPOS, Self Checkout, Kiosk and multiple store related technologies. The RSaaS application delivers superior functionality with ease of deployment across the estate.

Features

- Delivers ultimate flexibility without associated demands to the balance sheet.
- Enables central configuration and deployment across the estate with full resilience and security.
- Allows Retailers to fully focus on the core business
- Has an open platform which enables full integration with developing technologies and interaction with the new consumer
- Eliminates the need for significant areas of traditional capital expenditure
- Can be delivered via a “Pay as you Go” or rental model
- Offers rapid deployment/adoption at store level by directly replicating current application user interface
- Uses Active Store Command Technology giving virtually real-time amendments and modifications

DigiPoS Retail SaaS

Managing the New Customer and Store

RSaaS has been designed for rapid deployment and adoption at store level by directly replicating any current application user interface, ensuring fast familiarity for staff. In terms of growth and development. Active Store Command Technology ensures real-time amendments and modifications can be designed and readied for testing and implementation without the normally associated complex programming, disruption and delay.
